PUI assignment 6A Low Fidelity Prototypes

Shopping cart page:

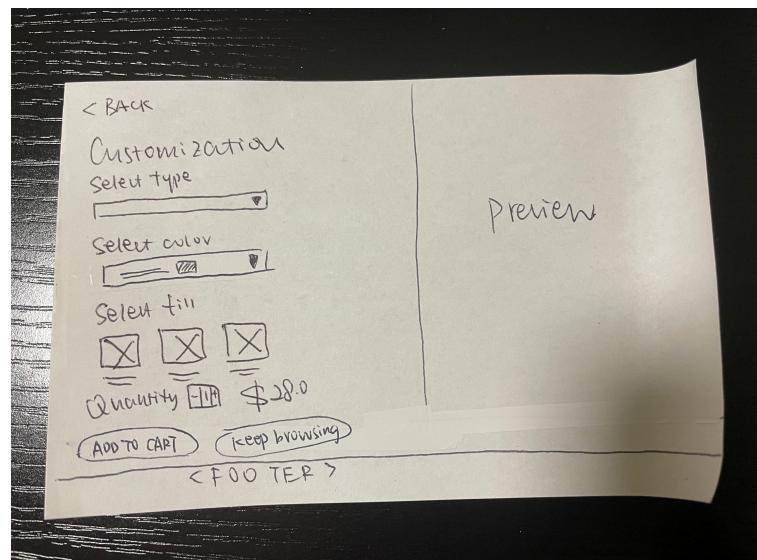

The shopping cart page is split into half: left is the current cart and right is the checkout. The cart shows the preview of the item users added into, and provides users with the freedom to edit and delete the item. It also shows the total cost of the entire order.

Customization Page:
sketch iteration 1

sketch iteration 2

I redesigned the customization page to add a preview section on the side to make the customization more intuitive. Iteration 1 needs users to do an extra click in order to see the preview, which I believe can be simplified into an always-on display on the side. Also, the dropdown would be a more space-efficient way of displaying the information, as well as making the current selection clear to the users.
